

Summary of academic paper for NADI 2019

Session II : ASEAN defence security foresighting in the next 2 decades (In case of Climate Change)

The issue of climate change is an important and interesting issue, because it effect to the natural disaster in a broad and effect to all countries such as floods, earthquakes, volcanic eruptions, high temperature weather and drought etc. There have 4 possible scenarios, which one;

1) Scenario A: There are conflicts in society due to people do not cooperate with governmental sector, so there is only the government who solve the problem of climate change. People are not aware of the problem for climate change, and also break the law too. All government projects do not get cooperation from the people.

2) Scenario B: There are establishment of a standard for legal measures in ASEAN both governmental sector and non-governmental sector. There are networks of cooperation for solving problems. People cooperate in compliance with laws, rule, order, and also do practice together. ASEAN is strong in dealing with climate change. There are effective responses to the disaster, since monitoring, preparation, disaster reliefs, and disaster recovery. ASEAN have a complete stockpiling.

3) Scenario C: There are no common ASEAN for a legal standard measures, both governmental sectors and non-governmental sectors. There is no cooperation network to solve problems. There is no cooperation in compliance with laws, rule, order, and no practice together.

4) Scenario D: People are aware of the problem and the government has just begun to recognize the problem. There has law enforcement, but it is inefficient. The law is very complicate and it is hard to edit.
